

FAQs

Q Will I have to empty my loft prior to installation?

A No, we can either empty your loft and place items neatly in an area of your choice, box items for you, or move things around in your loft as we work.

Q Will there be any mess for us to clear up once the installation is complete?

A No, we leave you as we find you, and return within 4–6 weeks, at a time convenient to you, for a further inspection.

Q Will any of my timbers be damaged or go mouldy?

A No, your timbers will benefit as they will not be open to damp air.

Q What if my roof is leaking prior to insulation?

A We will identify and repair any leaks you may have, and ensure your roof is water tight before the installation takes place.

Q Will I still need my current insulation?

A You will not have any use for your current insulation. Some clients prefer to have old insulation removed, which we can arrange to do if required.

Q Will this insulation add value to my property?

A By having this insulation installed, your EPC (Energy Performance Certificate) level will increase, which adds value to your home.

Q Will this foam stick or glue my roof tiles together?

A No, we always spray on to your felt, and place protective felt, or repair your felt if necessary. If you need to replace tiles at a later date this can be done with no disturbance to your insulation.

Q How long is the guarantee on this product?

A The product is guaranteed for 25 years.
